

Project LS Crude HUB Europoort

Europoort has been fully modernised in order to guarantee the continued supply of crude oil to the Pernis refinery.

The project

The project involved the construction of two in-situ buildings (Load Center 10 and station 200) including foundations, interior details and ground finishes. We were also responsible for the concrete foundations and outfitting of two other buildings, Auxiliary Room and station 200A.

Through an additional tender Visser & Smit Bouw has also produced, supplied and fitted two prefabricated buildings.

Facts and figures

Site

Europoort

Client

Shell Nederland

Status

Completed

Contract type

Specification and Drawings (design & build for prefab control rooms)

Consultant

SPIE Controlec Engineering B.V.
