

Crealis Bergen op Zoom

Underground storage + multifunctional building.

The project

The project comprised an (part) underground concrete (chemical) product store and a multifunctional building. The works covered all civil aspects: temporary sheet pile pit, groundwater pumping, pile foundations, concrete foundations, concrete works, steel structures, underground infrastructure/sewers and structural/architectural finishes.

A temporary sheet pile cofferdam was built to control the influx of canal water from the industrial port.

The site is directly adjacent to BRZO operations (Dutch Major Accidents (Risks) Decree) and the 'Industriehaven' canal which limited access to the site. Effective site containment allowed normal business operations to continue unhindered.

Facts and figures

Site

Bergen op Zoom

Client

Crealis Nederland B.V.

Status

Completed

Contract type
