

Refurbishment of office, laboratory and sheds for Inashco

Refurbishment of existing building to create an office with laboratory (analytical lab 37.5sqm), smelter and mineral grinder including all building-related services.

The project

The installations were incorporated into the existing sheds. In addition, the outdoor area was hard and soft landscaped.

The work was characterised by a high level of finish where sustainability played an important role; a high efficiency underfloor and space heating/cooling system was installed. In addition, the existing area was upgraded. The shell remained intact.

Temporary accommodation was built for the duration of the works.

Visser & Smit Bouw was responsible for supervision and accountability

Facts and figures

Site

Pernis

Client

Inashco Facilities b.v.

Status

Completed

Contract type

Bouwteam (Construction Team)
