

# New industrial building Abengoa

The new industrial building forms part of a carbon-capture plant in Rotterdam.

## The project

Notable features of the project were:

- Partially underground (11.5m)
- Concrete work: 500m<sup>3</sup> (concrete foundations)
- Cast piles (26m)
- Steel construction and sidings
- Prefabricated concrete plinth at base of facade
- Overhead cranes
- Concrete foundations for external equipment
- Constructed next to existing operational buildings

## Facts and figures

### Site

Botlek, Rotterdam

### Client

Linde Gas Benelux B.V.

### Status

Completed

### Contract type

Bouwteam (Construction team)

### Consultant

Linde Gas Division (DE)
