

Refurbishment & maintenance Gatehouse LUMC

For decades now we have been carry out all the renovation and maintenance works in this historical building. The works are always undertaken during normal office hours. Our organization is used to carrying out works with minimal inconvenience to the users, patients and visitors.

The project

All works are carried out in close cooperation with the facilities management organization of the Poortgebouw and the users/tenants of the remodelled rooms.

The projects are always organised as a construction team. The implementation of the projects does not an involve an architect. We provide all the architectural drawings in-house. MedicomZes is also responsible for the maintenance and adaptations of the E&W installations. We collaborate very closely with the client, and act as architectural consultant, as we know the property so well.

In 2010 we undertook a full renovation of the [roof and the façade](#).

Main Contractor

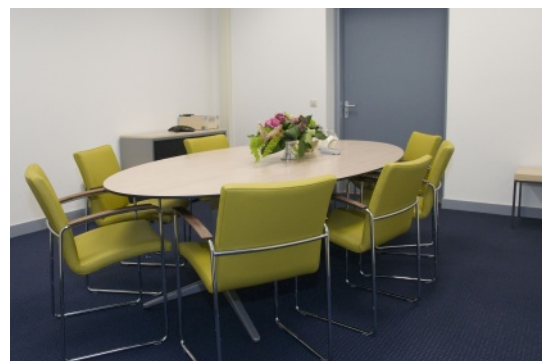

This project was delivered by [MedicomZes](#) (a trading name of Visser & Smit Bouw bv).
