

Teijin Aramid 'Nikko' expansion project

Implementation of the construction work (18 000sqm) including the building related services on the Teijin Aramid site in Emmen.

The project

The project was divided into eight sub-projects over the site, namely a spinning building, tank farm, sulphuric acid processor, cooling tower, extension of dispatch area and various outbuildings.

The works involved the implementation of the construction work including the (building-related) services.

There was a 9.50m¹ deep cellar built in a short space of time

The works were carried out in a fully working plant, which operated 24 hours a day.
