

## The Gelders House

On behalf of the In Domu Nova consortium, we have adapted the monumental accommodation of the province of Gelderland. We have delivered a modern and sustainable accommodation. In addition to the existing House of the Province, we have also provided a new building.

### Modern accommodation

Important values, both for the design of the Gelders House and for the provincial organisation, were transparency, accessibility, connection and cooperation. The strength of iDNova's design lies in the use of the valuable cultural-historical aspects of the province house and the architectural translation thereof, to the 21st century. The province opts for sustainable, energy-efficient and effective housing. The new space meets the modern requirements in terms of energy consumption, safety and technology. By taking account of future maintenance in the design phase and by the innovative application of modern materials, the maintenance costs remain as low as possible.

### Monumental Gesamtkunstwerk

The House of the Province is a true Gesamtkunstwerk from the post-war reconstruction period. In a period marked by a scarcity of materials, a true work of art was made with brick and great craftsmanship. The identity of the province as an organisation is therefore strongly interwoven with this monument, so the design was extended to the new building. For example, the facade pattern of the new building is based on the design of the longitudinal facades of the House of the Province and connections have been made between the provincial government building and the new building. In addition to the creation of a central meeting centre, an unusually shaped atrium roof was built that covers the courtyard.
